

Q1) Which of the following is a computer-generated text?

- A) **Better, Hermione thinks when she finally finds the shirt she has been looking for in the back of her closet.** She collects the first shirt she sees that she can still fit in her wand (of course, Hermione found one of the really big ones) and a broom of her own:
The first shirt she finds is quite big, still, but maybe it fits. She lifts the back up a bit and begins to put it on, making sure she knows exactly where to put the elbows and the knees. When she finally gets it on, she looks in her trunk, which is empty, as the shirt is missing, and cannot be brought there. Hermione presses her hands into the pockets and touches the two straps. This will help, she thinks.
- B) **Better, Hermione thinks when she finally finds the shirt she has been looking for in the back of her closet.** She slips it off the hanger and stares at it for a moment, then presses the black fabric to her nose and inhales. Clean parchment and freshly mowed grass. The scent still makes her heart beat a little faster.
The bedroom door thuds against the wall and she spins around, an almost-guilty expression taking hold of her features. "Who might it be?" she wonders out loud.

Q2) Why do you think it is a computer-generated?

Q3) Do you think the computer will be able to improve upon this in the next decade? What techniques specifically and why?
