

- 1) Calculate the value of remaining nodes (a, b, c, d, e, f, and g nodes) in the following min-max tree. The values of h, i, j, k, l, m, n, and o nodes are already calculated for you).

- 2) If we are using alpha-beta pruning, which nodes won't be calculated (including h, i, j, k, l, m, n, and o nodes)? Assume nodes are visited from left to right.
